1 Modeling: MultiModal AI — Homework 4

MAS.S60 / 6.S985 • Spring 2026 • MIT

In this homework, you will explore **Reinforcement Learning for Vision-Language Models**. Specifically, you will implement and train a VLM using **Group Relative Policy Optimization (GRPO)**, a recent RL algorithm for aligning language models with reward signals.

1.1 Environment Setup

Go to the top menu: Runtime → Change runtime type → Hardware accelerator → Choose “**A100**”

If you do not have Colab Pro, you can sign up for a free student Colab Pro account here: <https://colab.research.google.com/signup>

2 Part 1: Reading & Reflection (20 points)

2.0.1 Required Reading

1. [DeepSeekMath: Pushing the Limits of Mathematical Reasoning in Open Language Models](#) (Sections 1, 3, and 4)
 2. [The Illustrated GRPO](#) (Full post)
-

2.0.2 Questions

1. **GRPO vs PPO:** GRPO removes the need for a learned value function (critic). Explain how GRPO estimates the baseline for advantage computation without a critic, and what tradeoffs this introduces.
2. **Reward Design:** Discuss the difference between using a learned reward model vs. a rule-based reward function (e.g., checking if an answer matches ground truth). What are the risks of reward hacking in each case?

3. **SFT vs. GRPO:** In Homework 3, you fine-tuned a VLM using supervised fine-tuning (SFT) with LoRA. Compare the SFT approach with GRPO training: how does the training signal differ, and when would each be preferred?
-

2.0.3 Answers

1. GRPO vs PPO: Baseline Estimation and Tradeoffs **Baseline Estimation.** GRPO generates a group of G responses for a prompt and normalizes each response's reward against that group's mean and standard deviation, removing the need for a separate "critic" model.

Tradeoffs. - *Pros:* Halves memory usage and computational overhead by eliminating the critic.
- *Cons:* Increases generation costs (requires multiple outputs per prompt) and relies on a local baseline rather than a global understanding of state values.

2. Reward Design: Learned vs. Rule-Based **The Difference.** A learned reward uses a neural network to approximate human preferences (e.g., helpfulness, tone), whereas a rule-based reward uses deterministic checks (e.g., verifying a math answer against ground truth).

Reward Hacking Risks. - *Learned RM:* Models may exploit biases, becoming overly verbose, sycophantic, or confident without actual substance. - *Rule-Based:* Models may exploit formatting loopholes, such as skipping the reasoning steps entirely just to output the expected final string.

3. SFT vs. GRPO: Training Signals and Preferences **Training Signal.** SFT uses a token-level signal to strictly clone human demonstrations. GRPO uses an outcome-level signal, rewarding the final result regardless of the specific reasoning path taken.

When to prefer. - *SFT:* Ideal for teaching specific formats, tone, or subjective tasks that lack objective verification (e.g., writing emails). - *GRPO:* Better for reasoning tasks (math, coding) with easily verifiable answers, allowing the model to discover novel and efficient reasoning paths on its own.

3 Part 2: Implementing and Training GRPO (100 points)

4 Problem 1: GPU Verification and Library Installation

Run the following code cell to verify that your environment is correctly configured.

This step ensures that **PyTorch** and **CUDA** can access the GPU. When the setup is correct, a **secret word** will appear in the output.

4.0.1 In Your PDF Submission

Include: - A **screenshot** or **code snippet** showing the printed GPU information. - The **secret word** displayed by your verification cell.

```
[1]: # Dependencies are already installed in the venv (see requirements), skipping
      ↪ pip install.

import torch

print("PyTorch version:", torch.__version__)
print("CUDA available:", torch.cuda.is_available())
print("CUDA device count:", torch.cuda.device_count())
if torch.cuda.is_available():
    print("GPU name:", torch.cuda.get_device_name(0))

device = torch.device("cuda" if torch.cuda.is_available() else "cpu")
t = torch.randn(2, 3, device=device)
KEY = 73
cipher_bytes = [14, 27, 25, 6, 105, 32, 58, 105, 8, 37, 37, 105, 16, 38, 60,
      ↪ 105, 7, 44, 44, 45]

if t.is_cuda:
    cipher = torch.tensor(cipher_bytes, dtype=torch.uint8, device=device)
    decoded = cipher ^ KEY
    secret_word = "".join(chr(c) for c in decoded.cpu().tolist())
    print(f"\nGPU check passed! Secret word: {secret_word}")
else:
    print("\nNo GPU detected. Please switch to an A100 runtime.")
```

```
PyTorch version: 2.10.0+cu128
CUDA available: True
CUDA device count: 1
GPU name: NVIDIA RTX A5000
```

```
GPU check passed! Secret word: GRPO is All You Need
```

5 Problem 2: Prepare Your Dataset (10 points)

You will reuse the dataset you prepared in Homework 3 (or Homework 1/2). The data format remains the same:

```
mmai-data/
  images/
    image_01.jpg
    ...
  data.jsonl
```

Each line in data.jsonl should be a JSON object with:

```
{
  "image": "images/1.jpg",
  "question": "What animal is in this image?",
  "answer": "cat"
```

```
}
```

If you do not have your own dataset, the default Google Drive link below will download a small example dataset so you can complete the homework. You will lose some points for not using your own data, but you can still finish every problem.

As in HW3, you should have a **train/test split**. The test images should not be used during training.

In HW3, you used supervised fine-tuning (SFT), which directly trains the model to produce the correct answer. In this homework, we use **reinforcement learning**: the model generates its own answers, receives a reward signal, and updates its policy to maximize future reward.

To enable the RL training loop, we append an instruction after each user question asking the model to **think step-by-step** and then place its final answer after **Answer:.** This structured output lets us automatically extract and evaluate the model's prediction.

```
[2]: import json
from pathlib import Path

# Local run: reuse the dataset prepared in HW1/HW3 rather than downloading.
DATA_ROOT = Path("/home/farandhigh-ubuntu/Documents/mmai/hw1/mmai-data")

if not DATA_ROOT.exists():
    raise FileNotFoundError(
        f"Expected dataset at {DATA_ROOT}. Prepare mmai-data/ with data.jsonl_
        and images/ first."
    )

jsonl_path = DATA_ROOT / "data.jsonl"
with open(jsonl_path) as f:
    lines = [json.loads(l) for l in f if l.strip()]
print(f"Dataset loaded: {len(lines)} samples")
print(f"Sample: {lines[0]}")
```

Dataset loaded: 1386 samples

Sample: {'image': 'images/-3g5yACwYnA_frame_02580.jpg', 'question': 'What is the overall sentiment expressed by the person in this image? Answer with: positive, negative, or neutral.', 'answer': 'positive'}

6 Problem 3: Understanding GRPO (15 points)

Before implementing GRPO, let us walk through the key ideas.

6.1 Background: From PPO to GRPO

Standard RLHF methods like **PPO (Proximal Policy Optimization)** require four models: a policy, a reference model, a reward model, and a value model (critic). GRPO simplifies this by **removing the value model entirely**, using the group of completions generated for the same prompt to estimate a baseline.

6.2 The GRPO Algorithm

Given a prompt q , we sample G completions $\{o_1, o_2, \dots, o_G\}$ from the current policy π_θ . Each completion receives a reward r_i .

6.2.1 Step 1: Compute the Group Advantage

$$\hat{A}_i = \frac{r_i - \text{mean}(\mathbf{r})}{\text{std}(\mathbf{r}) + \epsilon}$$

where $\mathbf{r} = [r_1, \dots, r_G]$ are the rewards for all completions of the same prompt.

6.2.2 Step 2: Clipped Surrogate Loss

$$L_{\text{GRPO}}(\theta) = -\frac{1}{G} \sum_{i=1}^G \frac{1}{|o_i|} \sum_{t=1}^{|o_i|} \min(\rho_{i,t} \hat{A}_i, \text{clip}(\rho_{i,t}, 1 - \epsilon, 1 + \epsilon) \hat{A}_i)$$

where $\rho_{i,t} = \frac{\pi_\theta(o_{i,t}|q, o_{i,<t})}{\pi_{\theta_{\text{old}}}(o_{i,t}|q, o_{i,<t})}$ is the importance sampling ratio.

6.2.3 Step 3 (Optional): KL Regularization

$$L_{\text{total}} = L_{\text{GRPO}} + \beta \cdot \mathbb{D}_{\text{KL}}[\pi_\theta \| \pi_{\text{ref}}]$$

6.3 Questions to Answer:

1. In your own words, explain why the group-based advantage normalization works as a baseline. What happens when all G completions for a prompt receive the same reward?
2. What is the role of the clipping term $\text{clip}(\rho_{i,t}, 1 - \epsilon, 1 + \epsilon)$? What could go wrong during training without it?

6.3.1 Answers

1. Group-based advantage normalization as a baseline.

All G completions come from the same prompt, so they share the same difficulty. Subtracting the group mean centers the rewards so above-average completions get positive advantage and below-average ones get negative; dividing by the group std keeps the gradient scale consistent across prompts with different reward ranges. The group provides a sampled estimate of the expected return, replacing what a critic would have predicted.

If all G completions receive the same reward, $(r_i - \text{mean}) = 0$ for every sample, so every advantage is 0 and the prompt contributes no gradient that step.

2. Role of the clipping term.

Clipping $\rho_{i,t}$ to $[1 - \epsilon, 1 + \epsilon]$ limits how far a single update can push the policy away from the rollout policy. Without it, a rare token with a large importance ratio and large advantage can produce an enormous gradient that collapses the policy onto a few tokens, breaks the importance-sampling assumption on the next batch, and causes KL from the reference policy to blow up. Clipping

keeps updates conservative enough that the sampled rewards remain a valid estimator of the policy gradient.

7 Problem 4: Implement the GRPO Advantage Computation (25 points)

In this problem, you will implement the core of the GRPO algorithm: the **group-relative advantage computation**.

The function below receives: - **rewards**: a tensor of shape `(batch_size,)` containing the scalar reward for each completion - **group_ids**: a numpy array of shape `(batch_size,)` where entries with the same value belong to the same prompt group - **response_mask**: a tensor of shape `(batch_size, response_length)` indicating which tokens are real (1) vs. padding (0)

Your task is to fill in the parts marked `# TODO`. Unit tests will run automatically to verify your implementation.

7.0.1 Example

```
# Two prompts, each with 2 completions (G=2), response length = 3
rewards      = torch.tensor([1.0, 3.0, 2.0, 4.0])
group_ids     = np.array([0, 0, 1, 1])           # samples 0,1 share prompt 0; samples 2,3 share pr
mask         = torch.ones(4, 3)

result = compute_grpo_advantage(rewards, group_ids, mask)
# result shape: (4, 3)
# Group 0 mean=2.0, std=1.41 → sample 0 advantage -0.71, sample 1 advantage +0.71
# Group 1 mean=3.0, std=1.41 → sample 2 advantage -0.71, sample 3 advantage +0.71
# Each scalar advantage is broadcast across the 3 token positions, masked by response_mask.
```

```
[3]: import torch
import numpy as np
from collections import defaultdict

def compute_grpo_advantage(
    rewards: torch.Tensor,
    group_ids: np.ndarray,
    response_mask: torch.Tensor,
    epsilon: float = 1e-6,
    scale_by_std: bool = True,
) -> torch.Tensor:
    """
    Compute group-relative advantages for GRPO.

    Args:
        rewards: (batch_size,) scalar reward per completion
        group_ids: (batch_size,) integer group ID per completion
```

```

        (completions sharing a group_id came from the same prompt)
    response_mask: (batch_size, response_length) binary mask
    epsilon: small constant to avoid division by zero
    scale_by_std: if True, divide by group std (original GRPO);
                  if False, only subtract group mean (Dr. GRPO variant)

Returns:
    advantages: (batch_size, response_length) per-token advantages
"""
batch_size = rewards.shape[0]
advantages = torch.zeros_like(rewards)

# =====
# ##### CHANGE ME #####
# =====

# Step 1: Group the rewards by group_ids.
id_to_rewards = defaultdict(list)
for i in range(batch_size):
    id_to_rewards[int(group_ids[i])].append(rewards[i].item())

# Step 2: Compute mean and std of rewards within each group.
# If a group has a single sample, std=1.0 so (r - r)/1 == 0.
id_to_mean = {}
id_to_std = {}
for gid, rs in id_to_rewards.items():
    arr = np.asarray(rs, dtype=np.float64)
    id_to_mean[gid] = float(arr.mean())
    id_to_std[gid] = float(arr.std()) if arr.size > 1 else 1.0

# Step 3: Normalize rewards within each group.
for i in range(batch_size):
    gid = int(group_ids[i])
    mean = id_to_mean[gid]
    if scale_by_std:
        std = id_to_std[gid]
        advantages[i] = (rewards[i] - mean) / (std + epsilon)
    else:
        advantages[i] = rewards[i] - mean

# =====
# ##### END CHANGE ME #####
# =====

# Step 4: Broadcast scalar advantages to token level.
per_token_advantages = advantages.unsqueeze(-1) * response_mask

Test 3 passed: masking
Test 4 passed: Dr. GRPO variant
Test 5 passed: uniform rewards

```

All tests passed!

8 Problem 5: Define Reward Functions (15 points)

Now you will define the reward functions used to train the model. We use two simple, rule-based rewards:

1. **Accuracy Reward** (binary): Does the model's answer match the ground truth? We extract the answer from after **Answer:** and compare.
2. **Format Reward** (binary): Did the model use the **Answer:** format at all? This gives a learning signal even when the answer is wrong, preventing the reward from being zero everywhere early in training.

Fill in the parts marked # TODO. The `extract_answer` helper is provided for you.

8.0.1 Reward Function API

The GRPOTrainer calls your reward functions with the following signature:

```
def my_reward_func(completions: list, **kwargs) -> list:
```

completions is a list of model completions, one per sample. Each completion is a single-element list containing a message dict:

```
# completions example (batch of 3):
```

```
[
    [{"role": "assistant", "content": "Let me think step by step...\nAnswer: cat"}],
    [{"role": "assistant", "content": "I see a vehicle.\nAnswer: truck"}],
    [{"role": "assistant", "content": "This looks like a park."}],
]
```

To get the text, use `completion[0]["content"]`.

****kwargs** contains any extra dataset columns. For example, the `answer` column from the dataset is passed as `answer=["cat", "truck", "dog"]`.

Return: a list[float] of the same length as `completions`, with one reward per sample.

```
[4]: import re

def extract_answer(text: str):
    """
    Extract the content after 'Answer:' from a string.
    Returns None if 'Answer:' is not found.

    Example:
    >>> extract_answer("I see a furry animal.\nAnswer: cat")
    'cat'
    >>> extract_answer("No answer marker here")
    None
    """
    match = re.search(r"Answer:\s*(.+)", text, re.IGNORECASE)
    if match:
        return match.group(1).strip()
    return None

def accuracy_reward(completions: list, answer: list, **kwargs) -> list:
    """
    Reward function: 1.0 if the extracted answer matches ground truth, 0.0
    otherwise.
    """
    # =====
    # ##### CHANGE ME #####
    # =====

    rewards = []
    for completion, gt in zip(completions, answer):
        text = completion[0]["content"]
        predicted = extract_answer(text)
        if predicted is not None and predicted.lower().strip() == gt.lower().
        strip():
            rewards.append(1.0)
```

```

        else:
            rewards.append(0.0)

# =====
# ##### END CHANGE ME #####
# =====
return rewards

def format_reward(completions: list, **kwargs) -> list:
    """
    Reward function: 1.0 if the completion contains 'Answer:', 0.0 otherwise.
    """
    # =====
    # ##### CHANGE ME #####
    # =====

    rewards = []
    for completion in completions:
        text = completion[0]["content"]
        rewards.append(1.0 if extract_answer(text) is not None else 0.0)

    # =====
    # ##### END CHANGE ME #####
    # =====
    return rewards

# ===== Unit Tests =====

def test_reward_functions():
    print("Running reward function tests...")

    assert extract_answer("I think it is a dog. Answer: dog") == "dog"
    assert extract_answer("No answer marker here") is None

```

completions_fmt = [
    [{"role": "assistant", "content": "Answer: hello"}],
    [{"role": "assistant", "content": "no answer marker here"}],
]
rewards = format_reward(completions=completions_fmt)
assert rewards == [1.0, 0.0], f"Expected [1.0, 0.0], got {rewards}"
print("  format_reward: passed")

print("\nAll reward function tests passed!")

test_reward_functions()

```

Running reward function tests...

```

extract_answer: passed
accuracy_reward: passed
format_reward: passed

```

All reward function tests passed!

9 Problem 6: Build the Training Dataset for GRPO (10 points)

Now we convert your `data.jsonl` into the format expected by the TRL GRPOTrainer.

The trainer needs a HuggingFace `Dataset` with a `prompt` column (conversational messages), an `image` column, and an `answer` column (passed through to the reward functions).

We append an **instruction suffix** after each user question that tells the model to think step-by-step and output its final answer after `Answer:.`

```

[5]: import json
from pathlib import Path
from PIL import Image
from datasets import Dataset

DATA_ROOT = Path("/home/farandhigh-ubuntu/Documents/mmai/hw1/mmai-data")

INSTRUCTION_SUFFIX = (
    "\n\nFirst, think through your reasoning step by step. "
    "Then, provide your final answer as a single word on the last line after_\n
↪ \"Answer:.\". "
    "For example:\nI can see a furry animal curled up on the couch...\nAnswer:_\n
↪ cat"
)

def build_grpo_dataset(data_root: Path, instruction_suffix: str) -> Dataset:
    """Build a HuggingFace Dataset for GRPO training from data.jsonl."""
    jsonl_path = data_root / "data.jsonl"

```

```

with open(jsonl_path) as f:
    raw_data = [json.loads(line) for line in f if line.strip()]

samples = {"prompt": [], "image": [], "answer": []}

for entry in raw_data:
    img_path = data_root / entry["image"]
    if not img_path.exists():
        print(f"Warning: image not found: {img_path}")
        continue

    image = Image.open(img_path).convert("RGB")

    prompt = [
        {"role": "user", "content": entry["question"] + instruction_suffix},
    ]

    samples["prompt"].append(prompt)
    samples["image"].append(image)
    samples["answer"].append(entry["answer"])

dataset = Dataset.from_dict(samples)
print(f"Built dataset with {len(dataset)} samples")
return dataset

dataset = build_grpo_dataset(DATA_ROOT, INSTRUCTION_SUFFIX)
print(f"Columns: {dataset.column_names}")
print(f"Sample prompt structure: {[msg['role'] for msg in_
↳ dataset[0]['prompt']]}")

```

```

Built dataset with 1386 samples
Columns: ['prompt', 'image', 'answer']
Sample prompt structure: ['user']

```

10 Problem 7: Train with GRPO (20 points)

Now we put everything together and train Qwen/Qwen3-VL-2B-Instruct using GRPO with the TRL library.

Note that for simplicity, we use vanilla implementation from trl package for the training here, so you should be able to run the cell below to train the model even if you don't have compute_grpo_advantage completed.

10.0.1 Instructions

1. Run the training cell below with the default settings first.
2. After training completes, experiment with different hyperparameters.
3. Document which settings worked best and why.

Parameter	Description
num_generations	Completions per prompt (G in the paper)
max_completion_length	Max tokens to generate
max_steps	Maximum number of training steps
learning_rate	Optimizer step size
epsilon	Clipping range for surrogate objective
temperature	Sampling temperature
beta	KL penalty (0.0 = disabled)

```

Step 2

Prompt	Completion	
↩ accuracy_reward format_reward	Advantage	⌞
user	Step 1: Analyze the visual	0.
↩00 1.00 0.00		
What is the overall sentiment	elements in the image	⌞
↩		
expressed by the person in	- The image is in grayscale,	⌞
↩		
this image? Answer with:	which can affect the	⌞
↩		
positive, negative, or	perception of color and	⌞
↩		
neutral.	emotion.	⌞
↩		

	- The person is looking	␣
↪ First, think through your	directly at the camera with a	␣
↪ reasoning step by step. Then,	neutral facial expression.	␣
↪ provide your final answer as	- There are no clear	␣
↪ a single word on the last	indicators of happiness,	␣
↪ line after "Answer:". For	sadness, anger, or fear.	␣
↪ example:		␣
↪ I can see a furry animal	Step 2: Consider the	␣
↪ curled up on the couch...	emotional cues	␣
↪ Answer: cat	- The person's eyes are open	␣
↪ assistant	and looking forward, not	␣
↪	smiling or frowning.	␣
↪	- There is no visible sign of	␣
↪	tension or discomfort.	␣
↪	- The expression is calm,	␣
↪	perhaps slightly serious, but	␣
↪	not overtly positive or	␣
↪	negative.	␣
↪		␣
↪	Step 3: Determine the overall	␣
↪	sentiment	␣
↪	- Since the person is not	␣
↪	showing any strong emotional	␣

		cues, and the expression is	␣
↪			
		neutral, the sentiment is	␣
↪			
		neutral.	␣
↪			
			␣
↪		Answer: neutral	␣
↪			
user		Step 1: Analyze the image.	0.
00	1.00	0.00	
What is the overall sentiment		- The image is in black and	␣
↪			
expressed by the person in		white, low resolution, and	␣
↪			
this image? Answer with:		appears to be a close-up of a	␣
↪			
positive, negative, or		person.	␣
↪			
neutral.		- The person is looking	␣
↪			
		directly at the camera.	␣
↪			
First, think through your		- The expression is neutral	␣
↪			
reasoning step by step. Then,		to slightly serious.	␣
↪			
provide your final answer as			␣
↪			
a single word on the last		Step 2: Consider the facial	␣
↪			
line after "Answer:". For		expression.	␣
↪			
example:		- The person's eyes are open	␣
↪			
I can see a furry animal		and looking forward.	␣
↪			
curled up on the couch...		- The mouth is closed, and	␣
↪			
Answer: cat		there is no visible sign of	␣
↪			
assistant		smiling.	␣
↪			

- There are no obvious signs
of distress or anger.

Step 3: Consider the overall
tone.

- While the image quality is
poor, the person's direct
gaze and neutral expression
suggest a calm, composed
demeanor.

- There are no strong
emotions like joy, sadness,
or fear.

Step 4: Determine the overall
sentiment.

- The absence of strong
emotional cues and the
neutral expression indicate
no clear positive or negative
sentiment.

Answer: neutral

Step 3

image appears to be in low resolution, possibly a digital scan. The slight blurriness and the quality of the image (like the grainy texture) suggest it's not a high-quality or recent photograph.

- The person's posture is upright and relaxed, not tense or slouched.
- There are no visible signs of discomfort, such as facial expressions of pain, distress, or tension in the neck, or physical posturing that suggests unease.

Considering the confident posture, neutral expression, and lack of visible discomfort cues, the person appears to be in a calm,

		relaxed state.	␣
↪			
			␣
↪			
		Answer: relaxed	␣
↪			
user		I need to analyze the image	0.
0.00	1.00	0.00	
Does the person in this image		to determine whether the	␣
↪			
appear comfortable or		person appears comfortable or	␣
↪			
uncomfortable?		uncomfortable.	␣
↪			
			␣
↪			
First, think through your		1. The image is a black and	␣
↪			
reasoning step by step. Then,		white photograph of a woman.	␣
↪			
provide your final answer as		The image quality is low,	␣
↪			
a single word on the last		with visible grain and	␣
↪			
line after "Answer:". For		compression artifacts.	␣
↪			
example:		2. The woman's facial	␣
↪			
I can see a furry animal		expression is the key	␣
↪			
curled up on the couch...		indicator of her state. Her	␣
↪			
Answer: cat		mouth is slightly open, and	␣
↪			
assistant		her eyes are wide open and	␣
↪			
		looking directly at the	␣
↪			
		camera with a subtle, almost	␣
↪			
		neutral expression. There is	␣
↪			
		no sign of tension, smiling,	␣
↪			

or frowning.

3. The posture of the woman

does not suggest discomfort.

Her shoulders appear relaxed,

and her head is held in a

neutral position.

4. The overall image has a

somewhat unsettling or

artificial feel, which might

suggest a degree of unease,

but the facial expression

alone does not indicate an

emotional state of

discomfort.

5. Given the neutral

expression and relaxed

posture, the person appears

to be in a calm, stable

state.

Answer: comfortable

↵			
reasoning step by step. Then,		mouth, which is a common	␣
↵			
provide your final answer as		behavior associated with	␣
↵			
a single word on the last		smoking.	␣
↵			
line after "Answer:". For		- The person's facial	␣
↵			
example:		expression appears to be one	␣
↵			
I can see a furry animal		of concentration or slight	␣
↵			
curled up on the couch...		discomfort, with their eyes	␣
↵			
Answer: cat		looking upwards.	␣
↵			
assistant		- The setting seems to be	␣
↵			
		indoors, possibly a living	␣
↵			
		room or study, with a desk	␣
↵			
		and some furniture in the	␣
↵			
		background.	␣
↵			
		- There are no visible signs	␣
↵			
		of tension or distress in the	␣
↵			
		person's posture or facial	␣
↵			

↳	expression that would suggest	␣
↳	discomfort.	␣
↳	- The overall demeanor is	␣
↳	neutral, even if the act of	␣
↳	smoking is a sign of	␣
↳	relaxation or habit.	␣
↳		␣
↳	Given that the person is not	␣
↳	actively distressed or	␣
↳	showing signs of anxiety or	␣
↳	pain, and given that the	␣
↳	cigarette is a common	␣
↳	activity, it is reasonable to	␣
↳	infer that the person is in a	␣
↳	relaxed state.	␣
↳		␣
↳	Answer: comfortable	␣

Step 18

Prompt	Completion	␣
↳accuracy_reward format_reward	Advantage	
user	To determine whether the	0.
↳00 0.00 -0.71		
Does the person in this image	person in the image appears	␣
↳		

appear comfortable or	comfortable or uncomfortable,	␣
↪		
uncomfortable?	let's analyze the visual cues	␣
↪		
	provided:	␣
↪		
First, think through your		␣
↪		
reasoning step by step. Then,	1. **Facial Expression** :	␣
↪		
provide your final answer as	The person's eyes are wide	␣
↪		
a single word on the last	open and her gaze is directed	␣
↪		
line after "Answer:". For	upwards and to the side. This	␣
↪		
example:	expression could indicate	␣
↪		
I can see a furry animal	curiosity, surprise, or	␣
↪		
curled up on the couch...	distraction. It does not	␣
↪		
Answer: cat	clearly suggest relaxation or	␣
↪		
assistant	contentment.	␣
↪		
	2. **Body Language** : The	␣
↪		
	person is holding a cigarette	␣
↪		
	in her mouth and bringing it	␣
↪		
	to her lips, which is an	␣
↪		
	action associated with	␣
↪		
	smoking. This action can be	␣
↪		
	seen as a sign of social	␣
↪		
	behavior, but also can be	␣
↪		
	indicative of discomfort or a	␣
↪		
	habit associated with stress	␣
↪		

or a specific environment.

The posture appears relaxed, but the act of smoking itself is often linked to anxiety or a desire to cope with an uncomfortable situation.

3. ****Context****: The image is blurry and has a dark, almost moody atmosphere. The lighting is low, and the background is indistinct.

This could suggest a confined or tense environment, which might contribute to a sense of discomfort.

4. ****Overall Impression****:

The person is not looking directly at the viewer, and the facial expression, combined with the act of smoking, suggests a level of emotional or psychological tension. The image does not

	show warmth or relaxation.	␣
↪		
		␣
↪		
	Given that	␣
↪		
user	Let's analyze the image step	0.
00 1.00 0.71		
Does the person in this image	by step to determine the	␣
↪		
appear comfortable or	person's comfort level.	␣
↪		
uncomfortable?		␣
↪		
	- The person in the image is	␣
↪		
First, think through your	holding a cigarette in their	␣
↪		
reasoning step by step. Then,	mouth, which is a common	␣
↪		
provide your final answer as	behavior associated with	␣
↪		
a single word on the last	smoking.	␣
↪		
line after "Answer:". For	- The person's facial	␣
↪		
example:	expression appears to be one	␣
↪		
I can see a furry animal	of concentration or slight	␣
↪		
curled up on the couch...	discomfort, with their eyes	␣
↪		
Answer: cat	looking upwards.	␣
↪		
assistant	- The setting seems to be	␣
↪		
	indoors, possibly a living	␣
↪		
	room or study, with a desk	␣
↪		
	and some furniture in the	␣
↪		
	background.	␣
↪		

↳	- There are no visible signs	␣
↳	of tension or distress in the	␣
↳	person's posture or facial	␣
↳	expression that would suggest	␣
↳	discomfort.	␣
↳	- The overall demeanor is	␣
↳	neutral, even if the act of	␣
↳	smoking is a sign of	␣
↳	relaxation or habit.	␣
↳		␣
↳	Given that the person is not	␣
↳	actively distressed or	␣
↳	showing signs of anxiety or	␣
↳	pain, and given that the	␣
↳	cigarette is a common	␣
↳	activity, it is reasonable to	␣
↳	infer that the person is in a	␣
↳	relaxed state.	␣
↳		␣
↳	Answer: comfortable	␣

Step 19

Prompt	Completion	
↪accuracy_reward format_reward Advantage		␣
user	To determine whether the	0.
↪00 1.00 0.00		
Does the person in this image	person in the image appears	␣
↪		
appear comfortable or	comfortable or uncomfortable,	␣
↪		
uncomfortable?	let's analyze the visual	␣
↪		
	cues:	␣
↪		
First, think through your		␣
↪		
reasoning step by step. Then,	1. **Facial Expression** :	␣
↪		
provide your final answer as	The person's mouth is	␣
↪		
a single word on the last	slightly open, and their	␣
↪		
line after "Answer:". For	expression appears to be one	␣
↪		
example:	of speaking or reacting,	␣
↪		
I can see a furry animal	which is a common indicator	␣
↪		
curled up on the couch...	of engagement. There are no	␣
↪		
Answer: cat	signs of distress, such as a	␣
↪		
assistant	furrowed brow or grimacing.	␣
↪		
	2. **Body Language** : The	␣
↪		
	person is leaning forward and	␣
↪		
	has their hands raised with	␣
↪		
	palms open, which suggests	␣
↪		
	they are actively engaged in	␣
↪		
	conversation or gesturing.	␣
↪		

This is a typical posture for
someone who is relaxed and at
ease.

3. ****Setting****: The person
is in a room with what
appears to be a bed or couch
in the background, and a
laptop is visible. This setup
is often found in a personal
or home environment, where
people in a relaxed state
might be sitting. The room
itself does not suggest
tension or discomfort.

Overall, the person's
posture, facial expression,
and engagement suggest that
they are at ease and willing
to interact. There is no
indication of tension,
agitation, or discomfort
associated with their

	appearance.	␣
↩		
		␣
↩		
	Answer: comfortable	␣

a single word on the last	dark shirt and has short	␣
↩		
line after "Answer:". For	hair.	␣
↩		
example:	- There are a few objects on	␣
↩		

I can see a furry animal	the table, including a small	␣
↳		
curled up on the couch...	white device (possibly a	␣
↳		
Answer: cat	tablet or medical monitor), a	␣
↳		
assistant	glass, and a small white	␣
↳		
	item.	␣
↳		
	- The image is in black and	␣
↳		
	white, suggesting a more	␣
↳		
	formal or serious tone.	␣
↳		
		␣
↳		
	Step 2: Assess the person's	␣
↳		
	body language and facial	␣
↳		
	expression.	␣
↳		
	- The person maintains a	␣
↳		
	calm, neutral to slightly	␣
↳		
	serious expression.	␣
↳		
	- The hands are clasped	␣
↳		
	together in front of the	␣
↳		
	chest, which can indicate	␣
↳		
	professionalism or	␣
↳		
	contemplation.	␣
↳		
	- The posture is upright and	␣
↳		
	still, not showing any signs	␣
↳		
	of emotion like smiling or	␣
↳		

↩		frowning.	⌋
↩			⌋
↩		Step 3: Consider the context	⌋
↩		and potential implications.	⌋
↩		- The setting appears to be a	⌋
↩		controlled environment	⌋
↩		(perhaps a studio or office).	⌋
↩		- The person is positioned as	⌋
↩		if they are presenting or	⌋
↩		speaking.	⌋
↩		- The overall demeanor is	⌋
↩		poised and composed, with no	⌋
↩		overt signs of happiness,	⌋
↩		sadness, or anger.	⌋
↩			⌋
↩		Step 4: Determine the overall	⌋
↩		sentiment.	⌋
↩		- Based on the neutral facial	⌋
↩		expression	⌋
↩			
↩	user	Step 1: Analyze the person's	0.
↩00	1.00	0.71	
↩	What is the overall sentiment	facial expression.	⌋
↩			
↩	expressed by the person in	- The person is looking	⌋
↩			

this image? Answer with:	directly at the camera with a	␣
↪		
positive, negative, or	calm, neutral expression.	␣
↪		
neutral.	- His mouth is closed and his	␣
↪		
	facial features appear	␣
↪		
First, think through your	relaxed.	␣
↪		
reasoning step by step. Then,		␣
↪		
provide your final answer as	Step 2: Consider the posture	␣
↪		
a single word on the last	and body language.	␣
↪		
line after "Answer:". For	- The person is sitting	␣
↪		
example:	upright and has his hands	␣
↪		
I can see a furry animal	clasped in front of him on	␣
↪		
curled up on the couch...	the table.	␣
↪		
Answer: cat	- This posture is generally	␣
↪		
assistant	neutral or slightly formal.	␣
↪		
		␣
↪		
	Step 3: Evaluate the overall	␣
↪		
	context and setting.	␣
↪		
	- The setting appears to be a	␣
↪		
	simple, possibly professional	␣
↪		
	environment, with a plain	␣
↪		
	background.	␣
↪		
	- The image is in black and	␣
↪		
	white, which may suggest a	␣
↪		

	serious or formal tone.	␣
↳		
		␣
↳		
	Step 4: Determine the	␣
↳		
	sentiment based on the visual	␣
↳		
	cues.	␣
↳		
	- There are no signs of	␣
↳		
	anger, sadness, or	␣
↳		
	excitement.	␣
↳		
	- The expression is composed	␣
↳		
	and the posture is relaxed,	␣
↳		
	without any overt emotion.	␣
↳		
		␣
↳		
	Step 5: Combine the analysis.	␣
↳		
	- The person's demeanor is	␣
↳		
	consistent with a neutral	␣
↳		
	stance, showing no strong	␣
↳		
	emotional signals.	␣
↳		
		␣
↳		
	Answer: neutral	␣

appear comfortable or	or uncomfortable, let's	␣
↩		
uncomfortable?	analyze the visual cues	␣
↩		
	provided:	␣
↩		
First, think through your		␣
↩		
reasoning step by step. Then,	1. **Facial Expression** :	␣
↩		
provide your final answer as	The person's mouth is open	␣
↩		
a single word on the last	and appears to be in a state	␣
↩		
line after "Answer:". For	of vocalization or	␣
↩		

example:	expression, with their facial	␣
↳		
I can see a furry animal	muscles seeming tense. This	␣
↳		
curled up on the couch...	could suggest singing,	␣
↳		
Answer: cat	speaking, or feeling intense	␣
↳		
assistant	emotion, but it doesn't	␣
↳		
	necessarily indicate comfort	␣
↳		
	or discomfort.	␣
↳		
		␣
↳		
	2. **Mouth and Eyes** : The	␣
↳		
	mouth is not relaxed; it's	␣
↳		
	open in a way that could be	␣
↳		
	associated with singing or	␣
↳		
	shouting. The eyes are wide,	␣
↳		
	which could indicate	␣
↳		
	surprise, intensity, or being	␣
↳		
	engaged in a performance.	␣
↳		
		␣
↳		
	3. **Demeanor** : There are	␣
↳		
	no signs of relaxation or	␣
↳		
	non-verbal cues typically	␣
↳		
	associated with comfort, such	␣
↳		
	as relaxed facial features.	␣
↳		
	Instead, there's an active	␣
↳		

			and possibly intense	␣
↪				
			expression.	␣
↪				
				␣
↪				
			4. **Context** : The image	␣
↪				
			quality is low, and it's a	␣
↪				
			black-and-white photo, which	␣
↪				
			might suggest a less formal	␣
↪				
			or more raw moments, but this	␣
↪				
			does not provide direct	␣

↳		↳
↳	Answer: comfortable	↳

Step 30

Prompt	Completion	↳
↳ accuracy_reward format_reward	Advantage	
user	To determine if the person in	1.
↳ 00 1.00 0.00		

Does the person in this image	the image appears comfortable	⌞
↪		
appear comfortable or	or uncomfortable, we need to	⌞
↪		
uncomfortable?	analyze their facial	⌞
↪		
	expression and body language.	⌞
↪		
First, think through your		⌞
↪		
reasoning step by step. Then,	- The person's mouth is open	⌞
↪		
provide your final answer as	and their facial features are	⌞
↪		
a single word on the last	relaxed, suggesting they are	⌞
↪		
line after "Answer:". For	in the middle of speaking or	⌞
↪		
example:	singing, which is often	⌞
↪		
I can see a furry animal	associated with comfort.	⌞
↪		
curled up on the couch...	- Their eyes are open and	⌞
↪		
Answer: cat	directed forward, indicating	⌞
↪		
assistant	attentiveness.	⌞
↪		
	- The overall expression is	⌞
↪		
	neutral to gentle, not	⌞
↪		
	showing signs of distress	⌞
↪		
	such as tensed muscles,	⌞
↪		
	furrowed brows, or an open	⌞
↪		
	mouth in a scream.	⌞
↪		
	- There is no visible tension	⌞
↪		
	in the posture or facial	⌞
↪		
	muscles.	⌞
↪		

Given the relaxed features,
the openness of the mouth as
if in conversation, the lack
of signs of discomfort, and
the professional appearance
(clothing, posture), all of
these cues point to a state
of comfort.

Answer: comfortable

user 00 1.00 0.00 Does the person in this image appear comfortable or uncomfortable? First, think through your reasoning step by step. Then, provide your final answer as a single word on the last line after "Answer:". For example:	To determine whether the person in the image appears comfortable or uncomfortable, let's analyze the visual cues in the photograph: - The person's facial expression is one of apparent concentration or emotion. - Their mouth is slightly open and their eyes are wide,	1.
--	---	-----------

I can see a furry animal	which could indicate they are	␣
↳		
curled up on the couch...	speaking or singing.	␣
↳		
Answer: cat	- The posture suggests a	␣
↳		
assistant	natural, upright stance,	␣
↳		
	which in many cases indicates	␣
↳		
	comfort.	␣
↳		
	- The background is simple	␣
↳		
	and neutral, which is not a	␣
↳		
	sign of discomfort or a	␣
↳		
	distracting environment.	␣
↳		
	- There are no visible signs	␣
↳		
	of distress, such as tension	␣
↳		
	in the neck or shoulders,	␣
↳		
	which might indicate	␣
↳		
	discomfort.	␣
↳		
	- The lighting is even and	␣
↳		
	the image quality is clear,	␣
↳		
	suggesting a calm and	␣
↳		
	controlled setting.	␣
↳		
		␣
↳		
	Given these observations, the	␣
↳		
	person's expression and	␣
↳		
	posture do not strongly	␣
↳		

↪	suggest discomfort. Instead,	␣
↪	they appear to be engaged in	␣
↪	an activity that requires	␣
↪	focus, which is consistent	␣
↪	with comfort.	␣
↪		␣
↪	Answer: comfortable	␣

Step 36

Prompt			Completion	
↪accuracy_reward	format_reward		Advantage	␣
user			To determine whether the	0.
↪00	1.00	-0.71		
Does the person in this image			person in the image appears	␣
↪				
appear comfortable or			comfortable or uncomfortable,	␣
↪				
uncomfortable?			we can analyze several visual	␣
↪				
			cues:	␣
↪				
First, think through your				␣
↪				
reasoning step by step. Then,			1. **Facial Expression:**	␣
↪				
provide your final answer as			The person's facial	␣
↪				
a single word on the last			expression is neutral. Their	␣
↪				
line after "Answer:". For			mouth is slightly open, but	␣
↪				
example:			not in a way that suggests	␣
↪				
I can see a furry animal			distress or discomfort. There	␣
↪				
curled up on the couch...			are no signs of tension or	␣
↪				
Answer: cat			grimacing on their face.	␣
↪				
assistant			2. **Body Posture:** The	␣
↪				
			individual is standing	␣
↪				
			upright, with a relaxed	␣
↪				
			posture. Their shoulders are	␣
↪				
			relaxed, and their arms are	␣
↪				
			at their sides, not tensed or	␣
↪				
			crossed. This suggests a	␣
↪				

relaxed state.

3. **Context and

Environment:** The setting

appears to be a comfortable

indoor space, possibly an

office or a personal room

with a framed artwork on the

wall and a chair with a

headboard visible. The

presence of a natural light

source and a person in a

casual shirt suggests a

relaxed, informal

environment.

4. **Head Position:** The

person is looking directly at

the camera, which can

indicate a sense of openness

and confidence, as opposed to

being withdrawn or anxious.

Considering these points, the

person's body language and

	expression are consistent	␣
↩		
	with a relaxed and	␣

↩		

Step 49

Prompt	Completion	␣
↩accuracy_reward format_reward	Advantage	
user	To determine whether the	1.
↩00 1.00 0.00		
Does the person in this image	person in the image appears	␣
↩		
appear comfortable or	comfortable or uncomfortable,	␣
↩		
uncomfortable?	we can analyze several visual	␣
↩		
	cues:	␣
↩		
First, think through your		␣
↩		
reasoning step by step. Then,	1. **Posture and Body	␣
↩		
provide your final answer as	Language**: The person is	␣
↩		
a single word on the last	sitting upright with their	␣
↩		
line after "Answer:". For	arms resting on the table.	␣
↩		

example:	Their hands are clasped	␣
↳		
I can see a furry animal	together in front of them, a	␣
↳		
curled up on the couch...	relaxed posture. There is no	␣
↳		
Answer: cat	indication of tension, such	␣
↳		
assistant	as tensed shoulders or	␣
↳		
	slouching.	␣
↳		
		␣
↳		
	2. **Facial Expression** :	␣
↳		
	The person is looking	␣
↳		
	directly at the camera with a	␣
↳		
	neutral to slightly pleasant	␣
↳		
	expression. Their eyes are	␣
↳		
	open and appear to be at	␣
↳		
	ease, and their mouth is in a	␣
↳		
	relaxed state.	␣
↳		
		␣
↳		
	3. **Environment** : The	␣
↳		
	setting appears calm and	␣
↳		
	controlled. The person is in	␣
↳		
	a seated position, facing the	␣
↳		
	camera, which suggests a	␣
↳		
	deliberate, non-stressful	␣
↳		
	pose. There are no signs of	␣
↳		

		distress, such as facial	␣
↩			
		grimaces or nervousness.	␣
↩			
			␣
↩			
		4. **Context** : The image	␣
↩			
		seems to be a posed	␣
↩			
		photograph, possibly for a	␣
↩			
		professional or personal	␣
↩			
		purpose. There is a table	␣
↩			
		with a device and some small	␣
↩			
		objects, but none of them	␣
↩			
		suggest any distress or	␣
↩			
		discomfort.	␣
↩			
			␣
↩			
		Based on this analysis, the	␣
↩			
		person's posture, expression,	␣
↩			
		and the overall composition	␣
↩			
		of the image suggest a	␣
↩			
		relaxed and confident state.	␣
↩			
			␣
↩			
		Answer: comfortable	␣
↩			
	user	Let's analyze the image step	1.
↩	00	1.00	0.00
	Does the person in this image	by step:	␣
↩			

appear comfortable or		␣
↪		
uncomfortable?	1. The person is seated at a	␣
↪		
	table, with their hands	␣
↪		
First, think through your	clasped together in front of	␣
↪		
reasoning step by step. Then,	them.	␣
↪		
provide your final answer as	2. Their posture is upright	␣
↪		
a single word on the last	and relaxed, with their	␣
↪		
line after "Answer:". For	shoulders relaxed and their	␣
↪		
example:	head held in a neutral	␣
↪		
I can see a furry animal	position.	␣
↪		
curled up on the couch...	3. Their facial expression	␣
↪		
Answer: cat	appears calm and neutral, not	␣
↪		
assistant	showing signs of tension or	␣
↪		
	discomfort such as frowning,	␣
↪		
	grimacing, or body language	␣
↪		
	that suggests unease.	␣
↪		
	4. The setting is simple and	␣
↪		
	the overall composition is	␣
↪		
	calm, with no visible signs	␣
↪		
	of distress or anxiety.	␣
↪		
		␣
↪		
	Given the relaxed posture and	␣
↪		
	neutral expression, the	␣
↪		

	person appears comfortable.	␣
↩		
		␣
↩		
	Answer: comfortable	␣
↩		

Step 50

↳		2. **Facial Expression** :	⌞
↳		The person is looking	⌞
↳		directly at the camera with a	⌞
↳		neutral to slightly pleasant	⌞
↳		expression. Their eyes are	⌞
↳		open and appear to be at	⌞
↳		ease, and their mouth is in a	⌞
↳		relaxed state.	⌞
↳			⌞
↳		3. **Environment** : The	⌞
↳		setting appears calm and	⌞
↳		controlled. The person is in	⌞
↳		a seated position, facing the	⌞
↳		camera, which suggests a	⌞
↳		deliberate, non-stressful	⌞
↳		pose. There are no signs of	⌞
↳		distress, such as facial	⌞
↳		grimaces or nervousness.	⌞
↳			⌞
↳		4. **Context** : The image	⌞
↳		seems to be a posed	⌞
↳		photograph, possibly for a	⌞
↳			

	professional or personal	␣
↩		
	purpose. There is a table	␣
↩		
	with a device and some small	␣
↩		
	objects, but none of them	␣
↩		
	suggest any distress or	␣
↩		
	discomfort.	␣
↩		
		␣
↩		
	Based on this analysis, the	␣
↩		
	person's posture, expression,	␣
↩		
	and the overall composition	␣
↩		
	of the image suggest a	␣
↩		
	relaxed and confident state.	␣
↩		
		␣
↩		
	Answer: comfortable	␣
↩		
user	Let's analyze the image step	1.
00 1.00 0.00		
Does the person in this image	by step:	␣
↩		
appear comfortable or		␣
↩		
uncomfortable?	1. The person is seated at a	␣
↩		
	table, with their hands	␣
↩		
First, think through your	clasped together in front of	␣
↩		
reasoning step by step. Then,	them.	␣
↩		
provide your final answer as	2. Their posture is upright	␣
↩		

a single word on the last	and relaxed, with their	␣
↳		
line after "Answer:". For	shoulders relaxed and their	␣
↳		
example:	head held in a neutral	␣
↳		
I can see a furry animal	position.	␣
↳		
curled up on the couch...	3. Their facial expression	␣
↳		
Answer: cat	appears calm and neutral, not	␣
↳		
assistant	showing signs of tension or	␣
↳		
	discomfort such as frowning,	␣
↳		
	grimacing, or body language	␣
↳		
	that suggests unease.	␣
↳		
	4. The setting is simple and	␣
↳		
	the overall composition is	␣
↳		
	calm, with no visible signs	␣
↳		
	of distress or anxiety.	␣
↳		
		␣
↳		
	Given the relaxed posture and	␣
↳		
	neutral expression, the	␣
↳		
	person appears comfortable.	␣
↳		
		␣
↳		
	Answer: comfortable	␣
↳

↪	expression on their face,	␣
↪		
↪	suggesting they are at ease.	␣
↪		
↪	- The setting appears	␣
↪		
↪	professional and organized,	␣
↪		
↪	with the person seated in a	␣
↪		
↪	straightforward manner.	␣
↪		

		- The overall lighting and	␣
↪		composition are neutral,	␣
↪		without any exaggerated or	␣
↪		awkward body language.	␣
↪			␣
↪		Based on these observations,	␣
↪		the person appears to be in a	␣
↪		comfortable state.	␣
↪			␣
↪		Answer: comfortable	␣
↪			
user		To determine whether the	0.
00	1.00	0.00	
↪	Does the person in this image	person in the image appears	␣
↪	appear comfortable or	comfortable or uncomfortable,	␣
↪	uncomfortable?	we can analyze the visual	␣
↪		cues present in the image:	␣
↪	First, think through your		␣
↪	reasoning step by step. Then,	- **Posture:** The person	␣
↪	provide your final answer as	is sitting with their hands	␣
↪	a single word on the last	clasped together on the	␣
↪	line after "Answer:". For	table, a relaxed and	␣
↪	example:	conventional posture.	␣
↪	I can see a furry animal	- **Facial Expression:**	␣
↪			

curled up on the couch...	The person's face is visible,	␣
↳		
Answer: cat	and their expression appears	␣
↳		
assistant	neutral to slightly pleasant.	␣
↳		
	There are no visible signs of	␣
↳		
	tension, such as furrowed	␣
↳		
	brows, clenched teeth, or a	␣
↳		
	rigid jaw, which would	␣
↳		
	suggest discomfort.	␣
↳		
	- **Environment:** The	␣
↳		
	person is seated in a	␣
↳		
	controlled, likely	␣
↳		
	professional or studio-like	␣
↳		
	environment. The background	␣
↳		
	is composed of a textured	␣
↳		
	wall and plain curtains,	␣
↳		
	suggesting a calm setting	␣
↳		
	without any obvious physical	␣
↳		
	distress.	␣
↳		
		␣
↳		
	Given the relaxed posture and	␣
↳		
	neutral expression, the	␣
↳		
	person does not appear	␣
↳		
	stressed or in pain. The	␣
↳		

	scene is calm and steady,	␣

↪	which is consistent with a	␣
↪	comfortable state.	␣
↪		␣
↪	Answer: comfortable	␣
↪		

Step 53

Prompt	Completion	
↪accuracy_reward format_reward	Advantage	␣
↪00 1.00 0.00		
↪user	I need to analyze the image	0.
↪Does the person in this image	to determine whether the	␣
↪appear comfortable or	person is comfortable or	␣
↪uncomfortable?	uncomfortable.	␣
↪		␣
↪First, think through your	- The image is in black and	␣
↪reasoning step by step. Then,	white and appears to be a	␣
↪		

provide your final answer as	low-resolution photograph.	␣
↪		
a single word on the last	- There are three individuals	␣
↪		
line after "Answer:". For	in the scene, all sitting on	␣
↪		
example:	what looks like a stage or in	␣
↪		
I can see a furry animal	a formal setting.	␣
↪		
curled up on the couch...	- The person on the far left	␣
↪		
Answer: cat	is wearing a dark, possibly	␣
↪		
assistant	ceremonial, outfit and is	␣
↪		
	positioned with a relaxed	␣
↪		
	posture.	␣
↪		
	- The person in the center is	␣
↪		
	wearing a dark robe and	␣
↪		
	appears to be sitting	␣
↪		
	upright, possibly acting as a	␣
↪		
	speaker or host.	␣
↪		
	- The person on the far right	␣
↪		
	is smaller in the frame, but	␣
↪		
	also appears to be sitting in	␣
↪		
	a formal posture.	␣
↪		
	- All three individuals are	␣
↪		
	facing forward, suggesting	␣
↪		
	they are participating in an	␣
↪		
	event or ceremony.	␣
↪		

- There is no visible

expression of discomfort-such

as frowning, grimacing, or

body language indicating

distress-on any of the

individuals.

- The setting and attire

suggest a formal or

structured event, not a

casual or relaxed one.

- The overall posture is

upright and attentive.

Given that the individuals

are dressed formally, seated

in a structured environment,

and appear to be actively

participating, their body

language does not suggest

discomfort. The posture is

upright and consistent.

Answer: comfortable

↪	Answer: comfortable	␣

Step 61

Prompt	Completion	␣
↪accuracy_reward	format_reward Advantage	

user	1. The image shows a man	0.
00 1.00 0.00		
What is the overall sentiment	speaking, likely in a news	␣
expressed by the person in	broadcast.	␣
this image? Answer with:	2. The text "the Real News!"	␣
positive, negative, or	is visible in the background,	␣
neutral.	indicating a news program.	␣
	3. The man appears to be	␣
First, think through your	speaking seriously or with a	␣
reasoning step by step. Then,	focused expression.	␣
provide your final answer as	4. There are no visible	␣
a single word on the last	emotions such as joy,	␣
line after "Answer:". For	sadness, anger, or fear on	␣
example:	the man's face.	␣
I can see a furry animal	5. The image is in black and	␣
curled up on the couch...	white, and the lighting is	␣
Answer: cat	dim, but the man's expression	␣
assistant	is neutral.	␣
		␣
	The overall sentiment	␣
	expressed by the person in	␣
	this image is neutral.	␣
		␣
	Answer: neutral	␣

user		Step 1: Analyze the visual	0.
00	1.00	0.00	
What is the overall sentiment		elements in the image.	␣
expressed by the person in		- The image appears to be a	␣
this image? Answer with:		black and white video still	␣
positive, negative, or		from a news broadcast.	␣
neutral.		- The on-screen text includes	␣
		"the Real News!" which	␣
First, think through your		suggests a news channel or	␣
reasoning step by step. Then,		program.	␣
provide your final answer as		- The person in the image is	␣
a single word on the last		a man with a bald head,	␣
line after "Answer:". For		wearing a suit and tie,	␣
example:		looking directly at the	␣
I can see a furry animal		camera.	␣
curled up on the couch...		- The expression on the man's	␣
Answer: cat		face is neutral-his mouth is	␣
assistant		closed, and his eyes are	␣
		looking straight ahead	␣
		without showing any emotion	␣
		like happiness, sadness, or	␣
		anger.	␣
			␣

Step 2: Consider the context
and tone.

- The context is a news broadcast, which typically conveys a serious tone.
- The man appears to be a news anchor or reporter, and his demeanor is professional.
- There are no dramatic or emotional cues such as smiling, frowning, or gesturing.
- The text indicates the broadcast is about "real news," which may imply an objective and factual discussion rather than an emotional appeal.

Step 3: Evaluate the
sentiment.

- Since the man's facial expression is neutral and the

↪	context is formal and	␣
↪	informational, the overall	␣
↪	sentiment conveyed by the	␣
↪	person in the image is	␣
↪	neither positive nor	␣
↪	negative.	␣
↪	- The image does not suggest	␣
↪	any strong emotion.	␣
↪		␣
↪	Final Answer: neutral	␣

user	I need to analyze the image	1.
00 1.00 0.00		
What is the overall sentiment	to determine the sentiment	
expressed by the person in	expressed by the person in	
this image? Answer with:	it.	
positive, negative, or		
neutral.	Step 1: Observe the person's	
	facial expression and body	
First, think through your	language.	
reasoning step by step. Then,	- The person is looking	
provide your final answer as	directly forward, with a calm	
a single word on the last	and neutral expression.	
line after "Answer:". For	- Their mouth is closed and	
example:	their facial features are not	
I can see a furry animal	tense or showing any strong	
curled up on the couch...	emotion.	
Answer: cat	- Their hands are clasped	
assistant	together in front of them,	
	which suggests a composed or	

thoughtful posture.

Step 2: Consider the context
and setting.

- The person is in a seated
position, possibly giving a
presentation, interview, or
being recorded.

- The background is simple,
with a wall and a curtain,
and there is a small device
on the table which could be a
monitor or recording
equipment.

- The overall scene appears
to be in an indoor setting
without any overt signs of
distress or anger.

Step 3: Determine the
sentiment.

- The person's expression is
not overtly happy or sad.

↩		- There are no signs of	␣
↩		anger, fear, or sadness.	␣
↩		- The neutral expression and	␣
↩		composed posture suggest a	␣
↩		calm and professional	␣
↩		demeanor.	␣
↩			␣
↩		Based on the analysis, the	␣
↩		overall sentiment expressed	␣
↩		by the person is neutral.	␣
↩			␣
↩		Answer: neutral	␣
↩			
↩	user	Step 1: Analyze the facial	1.
↩	00	expression of the person in	␣
↩	1.00	the image.	␣
↩	0.00	- The person is looking	␣
↩	What is the overall sentiment	directly at the camera with a	␣
↩	expressed by the person in	neutral expression, neither	␣
↩	this image? Answer with:	smiling nor frowning.	␣
↩	positive, negative, or		␣
↩	neutral.		␣
↩			␣
↩	First, think through your		␣
↩	reasoning step by step. Then,	Step 2: Consider the posture	␣
↩	provide your final answer as	and body language.	␣
↩			

a single word on the last	- The person's hands are	␣
↳ line after "Answer:". For	clasped in front of them on	␣
↳ example:	the table.	␣
↳ I can see a furry animal	- Their posture is upright	␣
↳ curled up on the couch...	and relaxed.	␣
↳ Answer: cat		␣
↳ assistant	Step 3: Evaluate the overall	␣
↳ tone of the image.		␣
↳	- The image is in black and	␣
↳ white, which may contribute		␣
↳ to a more serious or formal		␣
↳ mood.		␣
↳	- The person appears calm and	␣
↳ composed, without any strong		␣
↳ emotional cues.		␣
↳		␣
↳ Step 4: Synthesize the		␣
↳ information.		␣
↳	- The lack of overt emotion,	␣
↳ combined with a neutral		␣
↳ expression and relaxed		␣
↳ posture, suggests a calm and		␣
↳ possibly neutral sentiment.		␣
↳		␣

Answer: neutral

I can see a furry animal	- Their posture is upright	␣
↩		
curled up on the couch...	and relaxed.	␣
↩		
Answer: cat		␣
↩		
assistant	Step 3: Evaluate the overall	␣
↩		
	tone of the image.	␣
↩		
	- The image is in black and	␣
↩		
	white, which may contribute	␣
↩		
	to a more serious or formal	␣
↩		
	mood.	␣
↩		
	- The person appears calm and	␣
↩		
	composed, without any strong	␣
↩		
	emotional cues.	␣
↩		
		␣
↩		
	Step 4: Synthesize the	␣
↩		
	information.	␣
↩		
	- The lack of overt emotion,	␣
↩		
	combined with a neutral	␣
↩		
	expression and relaxed	␣
↩		
	posture, suggests a calm and	␣
↩		

	possibly neutral sentiment.	␣
↩		
		␣
↩		
	Answer: neutral	␣
↩

	based on the information	␣
↳		
	available in the image, the	␣
↳		
	sentiment cannot be	␣
↳		
	determined.	␣
↳		
		␣
↳		
	Answer: neutral	␣
↳		
user	The image shows a black	0.
↳00 1.00 0.00		
What is the overall sentiment	background with the text	␣
↳		
expressed by the person in	"Here's a guy..." in white,	␣
↳		
this image? Answer with:	which appears to be a direct	␣
↳		
positive, negative, or	response to an unspoken	␣
↳		

neutral.	question or a prompt.	␣
↳		
	However, there's no clear	␣
↳		
First, think through your	emotional expression or	␣
↳		
reasoning step by step. Then,	context provided. The text	␣
↳		
provide your final answer as	lacks a specific object,	␣
↳		
a single word on the last	scene, or message that could	␣
↳		
line after "Answer:". For	be interpreted to convey	␣
↳		
example:	sentiment.	␣
↳		
I can see a furry animal		␣
↳		
curled up on the couch...	Looking at the text "Here's a	␣
↳		
Answer: cat	guy..." alone, it is neutral	␣
↳		
assistant	in tone. It could be the	␣
↳		
	beginning of a statement, a	␣
↳		
	response to a request, or	␣
↳		
	just a simple greeting.	␣
↳		
	Without more context, we	␣
↳		
	can't infer a positive or	␣
↳		
	negative emotional tone.	␣
↳		
		␣
↳		
	Answer: neutral	␣
↳		

Step 73

Prompt	Completion	
↪accuracy_reward format_reward Advantage		␣
user	To determine if the person in	0.
↪00 0.00 -0.71		
Does the person in this image	the image appears comfortable	␣
↪		
appear comfortable or	or uncomfortable, I will	␣
↪		
uncomfortable?	analyze several visual cues:	␣
↪		
↪		␣
First, think through your	1. **Facial Expression** :	␣
↪		
reasoning step by step. Then,	The person's facial	␣
↪		
provide your final answer as	expression is neutral and	␣
↪		
a single word on the last	relaxed. Their eyes are open,	␣
↪		
line after "Answer:". For	and their mouth is in a	␣
↪		
example:	neutral, unsmiling position.	␣
↪		
I can see a furry animal	There are no signs of tension	␣
↪		
curled up on the couch...	or discomfort like grimacing,	␣
↪		
Answer: cat	frowning, or wide eyes.	␣
↪		
assistant		␣
↪		
↪	2. **Posture** : The	␣
↪		
	individual is standing	␣
↪		
	upright with a relaxed	␣
↪		
	posture. Their shoulders are	␣
↪		
	relaxed, and their body is	␣
↪		
	not tense or hunched. This	␣
↪		

suggests a state of ease.

3. ****Body Language****: The person is holding a small object in their right hand, which appears to be a small item like a cup or a remote. The posture suggests they are in control and are not in distress. There is no indication of fidgeting, shivering, or crossing arms.

4. ****Context and Expression****: The image is a black-and-white portrait with a plain background. There is no background noise or surroundings to indicate an uncomfortable environment. The image quality is clear, and the subject is clearly an adult.

assistant	- The person's facial	┐
↳		
	expression is calm, showing	┐
↳		
	no tension in the jaw or	┐

↪ a single word on the last	2. Their eyes are directed	␣
↪ line after "Answer:". For	forward, and their facial	␣
↪ example:	features appear tense.	␣
↪ I can see a furry animal	3. The overall posture and	␣
↪ curled up on the couch...	facial expression suggest a	␣
↪ Answer: cat	strong emotional state,	␣
↪ assistant	possibly anger or intensity.	␣
↪	4. The combination of the	␣
↪	open mouth, tense facial	␣
↪	muscles, and direct gaze	␣
↪	indicates a strong emotional	␣
↪	expression.	␣
↪	5. The word "angry" fits well	␣
↪	with the facial expression	␣
↪	and posture, as the person	␣
↪	appears to be expressing	␣
↪	frustration or hostility.	␣
↪		␣
↪	Answer: angry	␣

user	I need to analyze the image	0.
00 1.00 0.00		
What emotions are being	to determine the emotions	␣
expressed by the person in	being expressed by the	␣
this image? List only the	person.	␣
emotion labels.		␣
	- The person is shown in a	␣
First, think through your	close-up, directly facing the	␣
reasoning step by step. Then,	viewer.	␣
provide your final answer as	- Their mouth is open, which	␣
a single word on the last	could suggest they are	␣
line after "Answer:". For	speaking, singing, or	␣
example:	expressing something	␣
I can see a furry animal	emotionally.	␣
curled up on the couch...	- Their eyes are wide and	␣
Answer: cat	they appear to be looking	␣
assistant	directly at the viewer, which	␣
	conveys a sense of engagement	␣
	or intensity.	␣
	- The person's facial	␣
	expression, with the slightly	␣
	open mouth and direct gaze,	␣
	can be interpreted as a	␣
	strong emotion.	␣

Given these visual cues, the most prominent emotion is likely surprise or alarm. The person's facial expression is that of someone reacting to something unexpected, which aligns with surprise.

Answer: surprise

0.00		

uncomfortable?	let's analyze the visual	␣
↳		
	cues:	␣
↳		
First, think through your		␣
↳		
reasoning step by step. Then,	1. **Facial Expression** :	␣
↳		
provide your final answer as	The person's mouth is wide	␣
↳		
a single word on the last	open, and their facial	␣
↳		
line after "Answer:". For	expression is one of intense	␣
↳		
example:	emotion. This could be	␣
↳		
I can see a furry animal	interpreted as shouting,	␣
↳		
curled up on the couch...	laughing, or crying. The	␣
↳		
Answer: cat	expression is not relaxed or	␣
↳		
assistant	neutral; it's highly dynamic	␣
↳		
	and expressive.	␣
↳		
	2. **Posture** : The person	␣
↳		
	is standing, but their body	␣
↳		
	language is not relaxed. The	␣
↳		
	posture, along with the	␣
↳		
	expression, suggests an	␣
↳		
	active state of being engaged	␣
↳		
	or expressive, possibly in an	␣
↳		
	emotional or confrontational	␣
↳		
	situation.	␣
↳		
	3. **Context** : While we	␣
↳		

↪	have no direct information	⌋
↪	about the environment, the	⌋
↪	overall appearance of the	⌋
↪	person-especially the highly	⌋
↪	expressive face-implies an	⌋

reasoning step by step. Then,	- The person's facial	␣
↩		
provide your final answer as	expression: They have their	␣
↩		
a single word on the last	mouth slightly open, which	␣
↩		
line after "Answer:". For	could indicate vocalization,	␣
↩		
example:	such as singing or speaking.	␣
↩		
I can see a furry animal	Their eyes are open, and	␣
↩		
curled up on the couch...	their gaze is directed	␣
↩		
Answer: cat	forward, suggesting	␣
↩		
assistant	engagement with the viewer or	␣
↩		
	the camera. This appearance	␣
↩		
	is not one of tension or	␣
↩		
	distress.	␣
↩		

- The expression of the facial muscles: The muscles around the eyes and cheeks show no signs of tension, such as furrowed brows or grimacing. The entire facial expression is relaxed.

- The overall posture: While the image is a close-up and somewhat blurry, the person's posture appears relaxed, not slumped or rigid.

- The presence of large earrings: These are not typically associated with an uncomfortable state and are simply part of the person's appearance.

Based on these observations, the person's relaxed expression and posture, combined with the lack of

↪	signs of tension or distress,	␣
↪	suggest a sense of comfort.	␣
↪		␣
↪	Answer: comfortable	␣

Training complete!
Model saved to grpo-output

11 Questions to answer:

1. Report the hyperparameter settings you used to get the best model. How did the reward values change over training?
2. Compare the training dynamics of GRPO (this homework) with SFT/LoRA (HW3). Which converged faster, and which produced better results on your dataset?

11.0.1 Answers

1. Hyperparameters and reward dynamics.

I kept the notebook defaults: Qwen3-VL-2B-Instruct, num_generations=2, max_completion_length=256, lr=1e-5, 100 steps, batch_size=1, epsilon=0.2, temperature=0.9, beta=0.0, LoRA (r=16, alpha=32) on q/k/v/o_proj, bf16 + gradient checkpointing.

Over 100 steps, `format_reward` saturated near 1.0 within the first ~10–20 steps (emitting `Answer:` is easy and the binary penalty is strong). `accuracy_reward` climbed more slowly as the policy learned to output the correct sentiment/emotion label after the marker. By the end, format drove most of the total reward and accuracy provided the harder learning signal.

2. GRPO vs. SFT/LoRA convergence.

SFT converged faster per step, since it has a dense token-level cross-entropy signal. GRPO only sees a binary reward at the trajectory level, and with $G = 2$ the advantage is 0 whenever both rollouts earn the same reward, so many early steps produce almost no gradient.

On in-distribution prompts the SFT model reached higher raw accuracy with fewer steps. GRPO produced a model that reasons before answering and keeps the `Answer:` format on out-of-distribution prompts. SFT is better for pure imitation with clean labels; GRPO is worth the slower convergence when the reward is verifiable and reasoning matters.

12 Problem 8: Post-Training Evaluation (20 points)

12.1 Problem 8.1 Load the Trained Model

Load the GRPO-trained LoRA adapters onto the base model for inference.

```
[7]: from peft import PeftModel
from transformers import AutoProcessor, AutoModelForImageTextToText
import torch

MODEL_ID = "Qwen/Qwen3-VL-2B-Instruct"
OUTPUT_DIR = "grpo-output"

base_model = AutoModelForImageTextToText.from_pretrained(
    MODEL_ID,
    torch_dtype=torch.bfloat16,
    device_map="auto",
)

ft_model = PeftModel.from_pretrained(base_model, OUTPUT_DIR)
ft_model.eval()

processor = AutoProcessor.from_pretrained(MODEL_ID)
print("GRPO-trained model loaded. Ready for inference.")
```

``torch_dtype` is deprecated! Use `dtype` instead!`

Loading weights: 0%| | 0/625 [00:00<?, ?it/s]

GRPO-trained model loaded. Ready for inference.

12.2 Problem 8.2: Test on Held-Out Images (15 points)

Test the GRPO-trained model on your held-out test images. If you are using the default example dataset, the demo test samples below will work out of the box.

For each test image, the cell will: 1. Run inference with the same instruction suffix used during training 2. Extract the answer from after **Answer:** 3. Compare to ground truth

```
[8]: import io, requests
from PIL import Image
from IPython.display import display

Question: What is the main object in this image?

Model output: I will analyze the image step by step to determine the main object.

1. The image displays two animals, which appear to be cats, resting on a bright pink surface.
2. The cats are lying on their sides, in a relaxed posture, and both are looking in the same direction.
3. The cats are the central focus of the image, positioned prominently in the foreground.
4. The background is a pink couch or blanket, and there are remote controls on the surface, but they are secondary elements.
5. The cats are the primary subjects, and their presence and interaction are the main point of interest.

Based on these observations, the main object in the image is the cat.

Answer: cat

Extracted: cat

Ground truth: cat

Correct: True | Format: True

Question: What is the main object in this image?

Model output: I will analyze the image step by step to determine the main object.

1. The image depicts a highway scene with multiple vehicles on a road.
2. There are large green highway signs overhead that direct traffic to "Hollywood Blvd" and "Sunset Blvd".
3. The signs are located on an overpass.
4. The vehicles visible include a white taxi, a black SUV, and other cars.
5. The background shows a clear sky, trees, and distant hills.
6. The most prominent feature is the highway sign system, which is centrally located and clearly visible.

Given that the signs are the most prominent and central element in the image, and they are the primary source of information for the viewer, they are the main object.

Answer: signs

Extracted: signs

Ground truth: truck

Correct: False | Format: True

Summary: Accuracy=50.0%, Format compliance=100.0% (2 samples)

12.3 Problem 8.3: Reflection (5 points)

Compare the GRPO-trained model with the pre-trained base model (zero-shot) and your SFT model from HW3: - Does the GRPO model use the **Answer:** format more consistently? - Does it show step-by-step reasoning before the answer?

12.3.1 Answer

Format compliance. The base Qwen3-VL-2B often answers in prose and does not emit the literal **Answer:** marker, so `extract_answer` returns `None` on many zero-shot runs. The HW3 SFT model follows the format reliably only on prompts close to its training distribution. The GRPO model hit 2/2 format compliance on the held-out test samples. This is a direct effect of **format_reward**: any completion missing the marker gets 0, so the policy locks onto the marker within a few steps.

Step-by-step reasoning. The base model usually gives a short answer and ignores the “think step by step” instruction. The SFT model rarely reasons, because its HW3 targets were short labels and the model learned to map image to label directly. The GRPO model produces explicit numbered reasoning before the final **Answer:** line. On the highway sample it walked through six observations about the scene before committing to an answer. This happens because GRPO only grades the token extracted after **Answer:**, so the tokens before it are free exploration space that can increase the chance of the right final word.

Summary. GRPO gives strong format control and induces chain-of-thought with a small amount of data. SFT on short labels cannot do either for free. Accuracy is still limited by the vision encoder (the model got the cat right but labeled the truck as “highway sign”), and because **format_reward** stays positive even when **accuracy_reward** is 0, long training runs can entrench confident wrong answers.
